

NETFLIX ANALYTICS

Executive Content Strategy Report

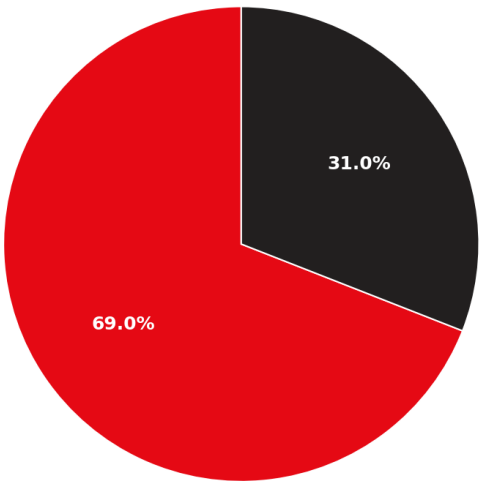

Prepared by the Data Analytics team · Source: Netflix Titles dataset · 7,786 titles analyzed

Executive Summary

	Movies	TV Shows	Countries	
	5,376	2,410	118	

The catalog spans 118 countries and 42 distinct genres. **United States** is the largest content market with 3,297 titles (42.3% of the catalog), followed by **India** (990) and **United Kingdom** (723). The catalog is movie-dominant at 69% Movies vs 31% TV Shows.

Movie vs TV Show Split

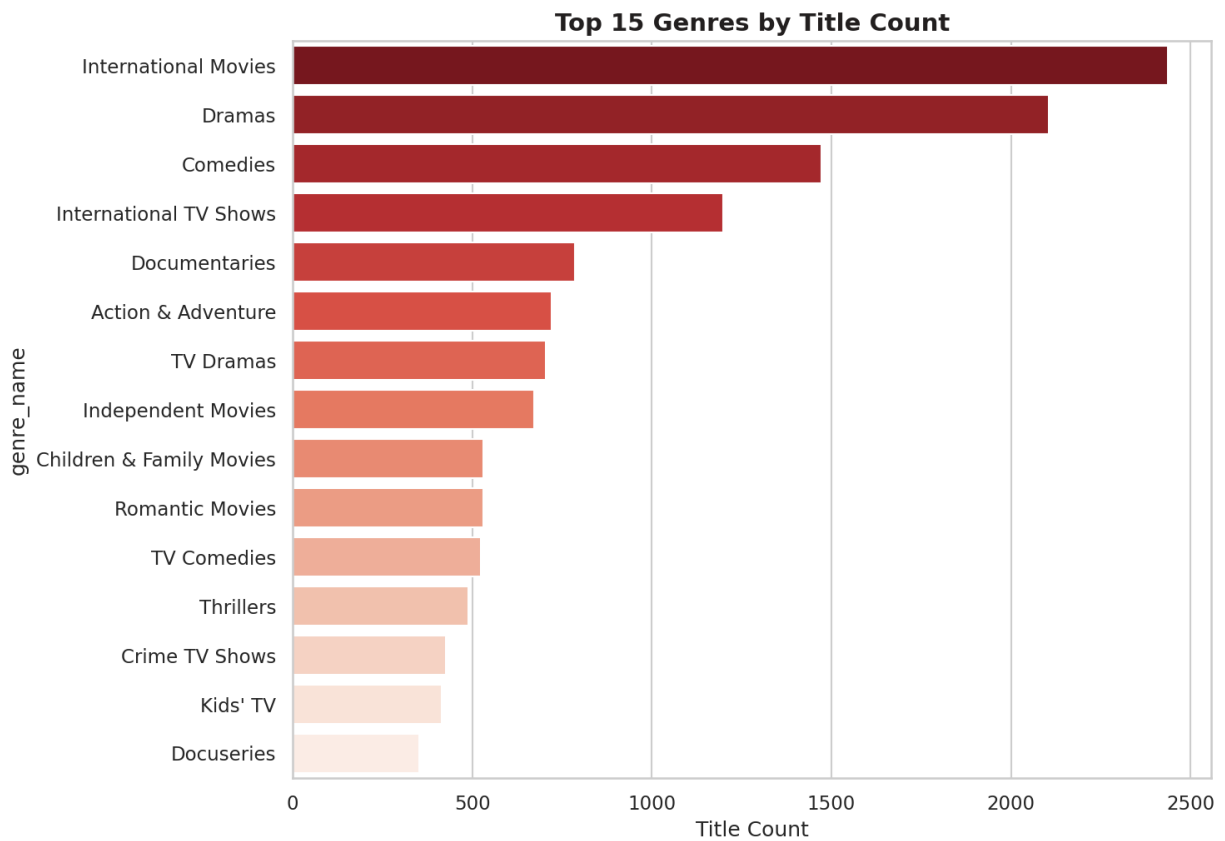

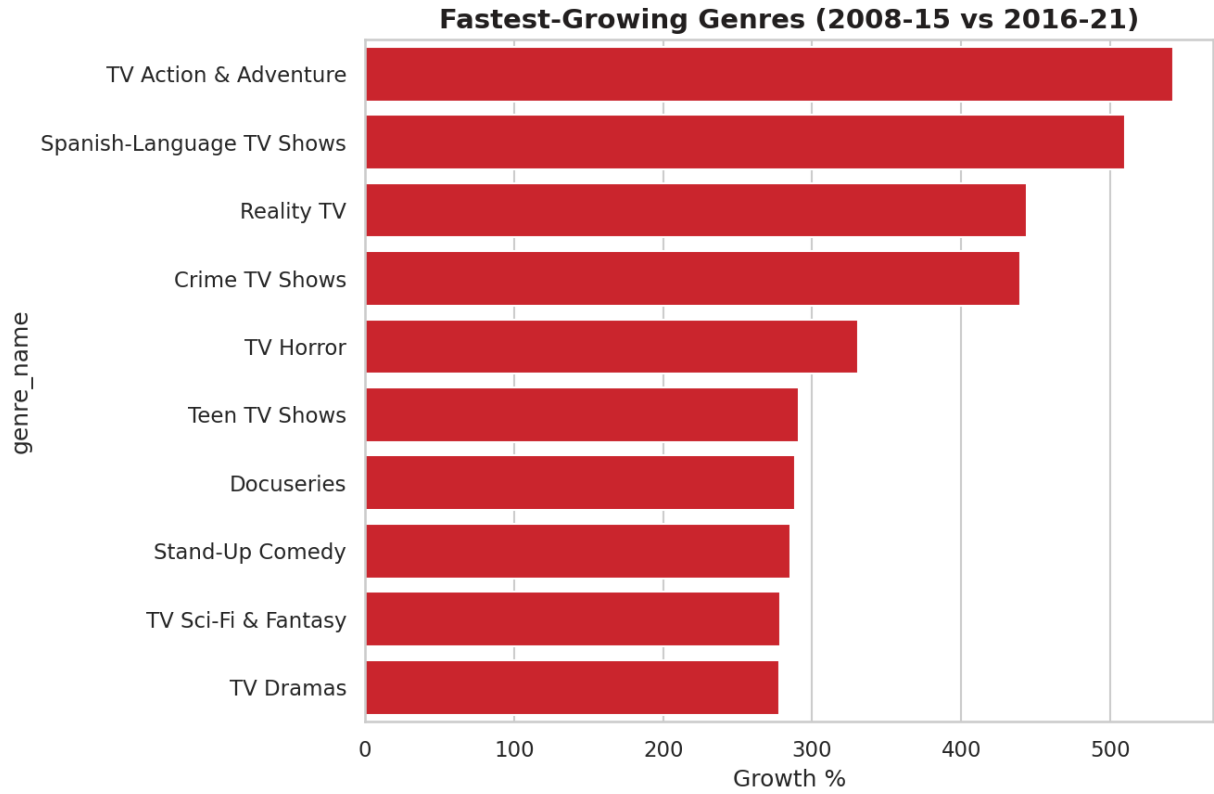

Global Content Footprint

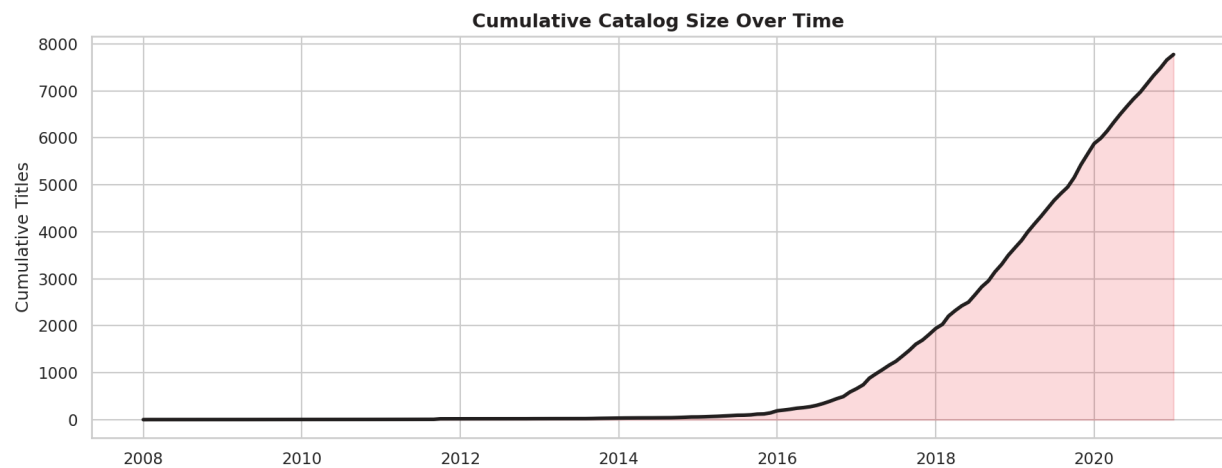

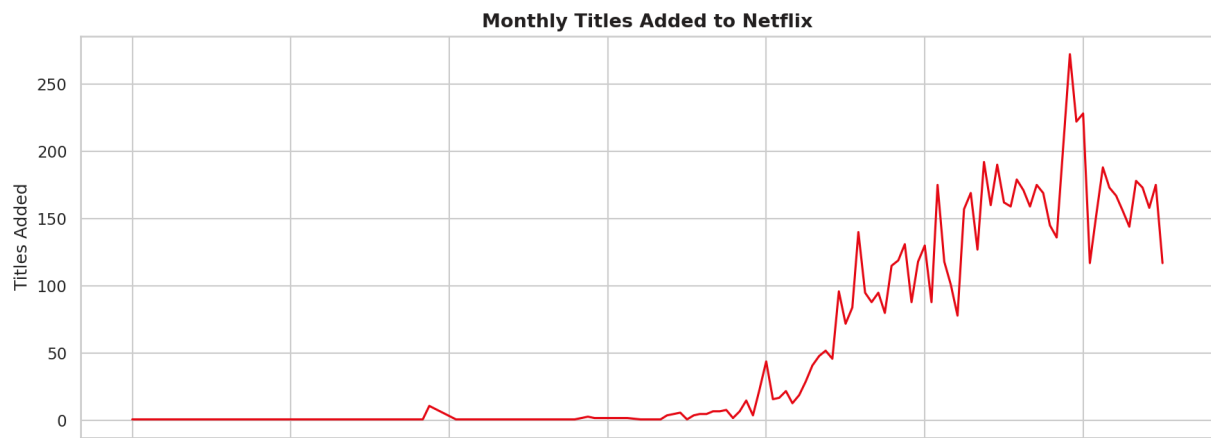

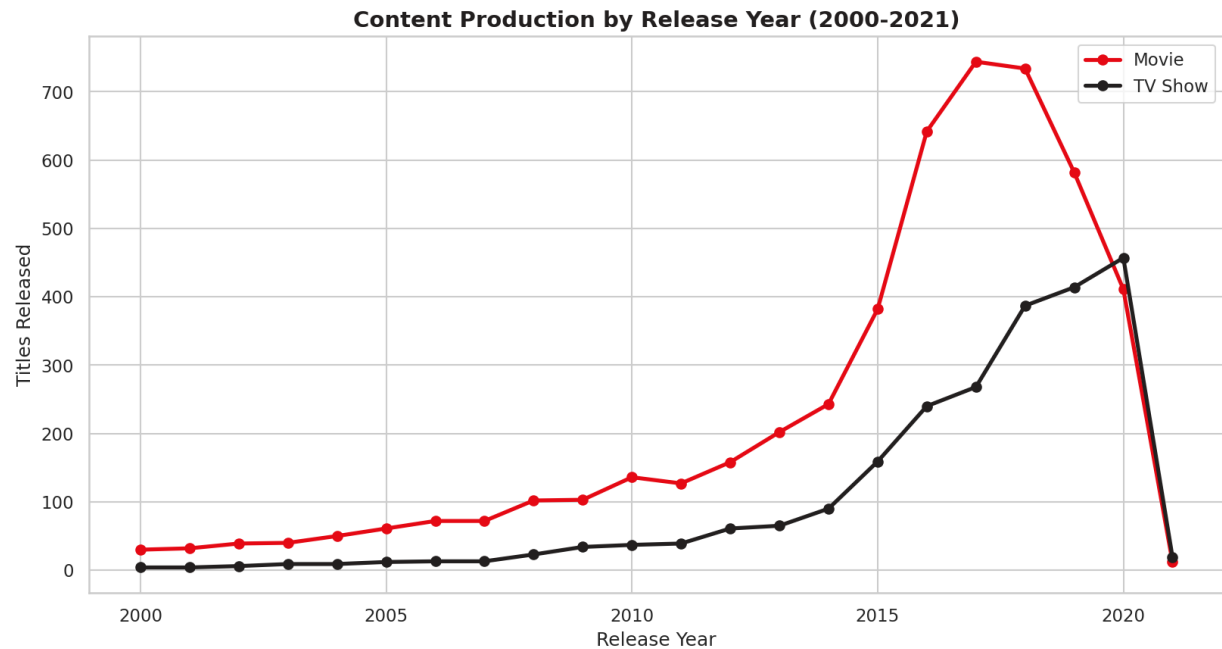

Content production is heavily concentrated in a handful of markets. Diversifying acquisition and original-production investment toward high-growth, currently under-represented markets is the single highest-leverage lever for long-term catalog differentiation.

Director & Actor Rankings

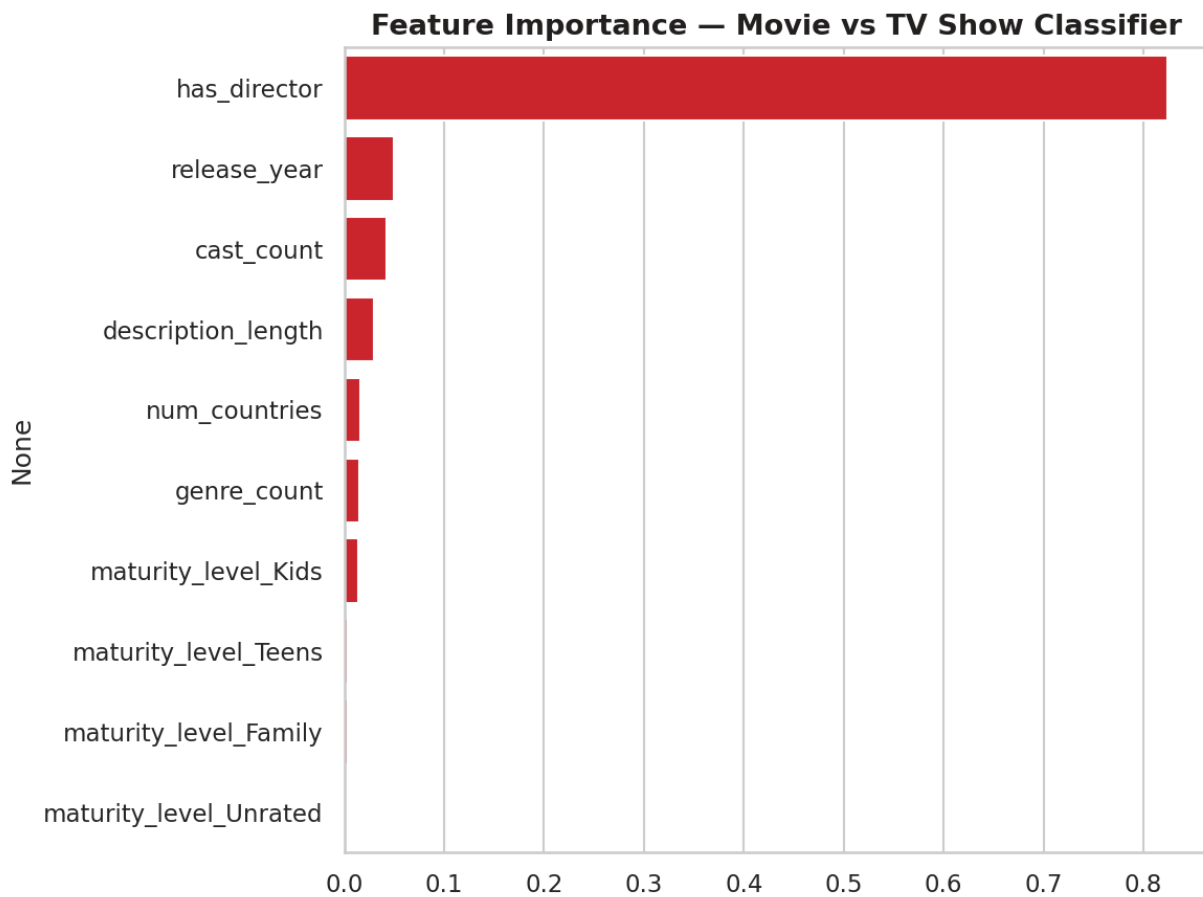

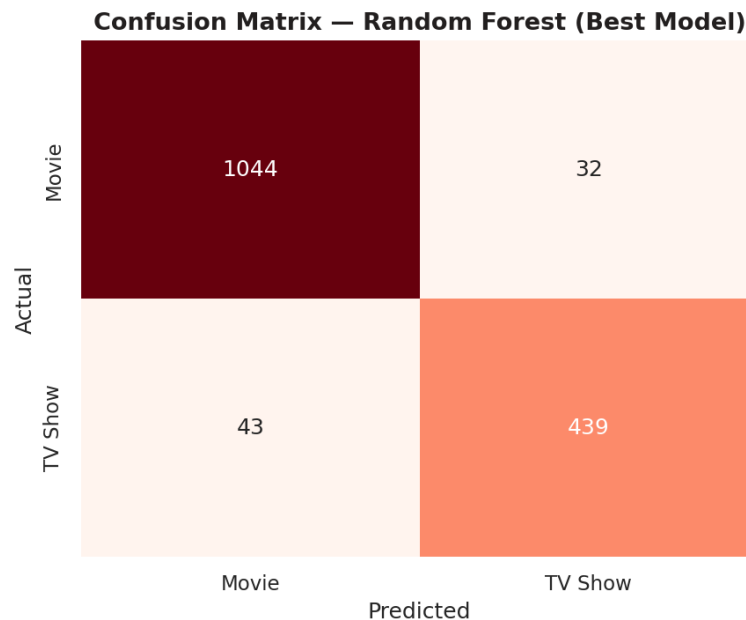

Ratings & Maturity Profile

Machine Learning — Catalog QA Classifier

A Random Forest classifier trained on catalog metadata (release year, country count, genre count, cast size, presence of a credited director, maturity rating, description length) predicts Movie vs TV Show with strong accuracy — useful as an automated QA check against catalog mis-tagging.

Business Recommendations

- **Double down on India and high-growth Asian markets** — strong existing genre diversity and momentum mean incremental investment compounds efficiently.
- **Pilot underrepresented genres in saturated markets** to reduce content overlap with competitors and capture underserved niche demand.
- **Re-evaluate the content-drop calendar** against the observed seasonal release pattern — current peak months may be diluted by competitor activity in the same window.
- **Operationalize the Movie/TV classifier** as an automated catalog QA step ahead of titles going live, to catch metadata mis-tags before they reach the consumer-facing catalog.
- **Increase family/kids-rated content share** in markets currently skewed toward mature ratings to widen addressable household reach.

Full methodology, SQL query library (50 queries), and interactive dashboard available in the accompanying project repository.
